SUMMARY

AI Developer with ~2 years of experience building Python backend systems and GenAI applications. Experienced with FastAPI, LLM integration (OpenAI, Gemini), and building AI-evaluation pipelines with grounding/hallucination checks. Currently combines backend development with benchmark and evaluation work for Handshake AI and Snorkel AI.

EXPERIENCE

AI Developer, Canum.ai Sep 2024 – Mar 2026

- **Developed** Python backend pipelines integrating **OpenAI GPT-3/4 APIs** to automate cybersecurity alert analysis, reducing manual triage effort.
- **Designed modular data processing workflows** to classify and summarize security alerts across multiple endpoints.
- **Developed** scalable **FastAPI backend services** to ingest, process, and analyze high-volume security event data.
- **Implemented** structured logging, error handling, and debugging pipelines to ensure **99%+ backend reliability**.
- **Authored** technical documentation and contributed to proof-of-concept backend architecture designs.

AI Evaluation Contractor, Crossing Hurdles(Remote) Mar 2026 – Present

- **Handshake AI:** Analyze real-world software codebases and build **benchmark tasks** used to evaluate foundational LLMs on production-scale software engineering problems.
- **Handshake AI:** Design terminal-based reasoning tasks and web-search benchmarks used to test LLM performance against suites like **Terminal Bench**.
- **Snorkel AI:** Debug CI/test-grading configurations and apply **mutation testing** to catch weak test coverage and improve evaluation accuracy of LLM-generated code.

PROJECT

ElevateCV AI — AI Resume Intelligence Platform — github.com/megh-prg/elevatecv-ai

- **Built** an end-to-end **FastAPI + React** platform that parses resumes and job descriptions into structured JSON and scores fit with a hybrid pipeline: deterministic keyword/section/formatting checks (50/20/15/15 weighted) plus LLM-based extraction — avoiding pure-LLM score variance.
- **Designed** a **grounding layer** that validates every AI-rewritten resume against the source: skills or JD keywords the model adds but can't be verified in the original text are stripped and returned as unsupported_claims rather than shown to the user.
- **Implemented async optimization jobs** on a Celery/Redis worker with a tracked status lifecycle (queued → processing → completed/failed) and automatic retry with backoff on failure.
- **Built** a reproducible **evaluation harness** against a hand-labeled dataset — **100% precision/recall** on skill-matching (12 cases) and grounding/hallucination detection (6 cases); backed by a 20-test pytest suite and CI via GitHub Actions.

Technologies: Python, FastAPI, Pydantic, Motor (async MongoDB), Celery, Redis, Gemini API, React, Docker, GitHub Actions, pytest

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

Backend: FastAPI, Django, REST APIs, Pydantic, SQLAlchemy / Motor

AI / GenAI: LLM Integration (OpenAI, Gemini), Prompt Engineering, RAG concepts, LLM Evaluation, Hallucination/Groundedness Checks

Databases: PostgreSQL, MongoDB, Redis, SQL

Async / Infra: Celery, Redis Queues, Docker, Docker Compose, GitHub Actions

Testing: Pytest, Mutation Testing, Regression Debugging

Frontend / Tools: React.js, HTML, CSS, Git, Linux, Postman

EDUCATION

Master of Computer Applications (AI & Machine Learning), Chandigarh University Aug 2022 – Jun 2024

Bachelor of Computer Applications, Patliputra University Aug 2018 – Aug 2021
